## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nelson et al. (WO 01/85385A1) in view of Litwinski et al. (6,257,479) of the IDS and Packer et al. (WO 02/100586A1). Nelson et al. teaches the friction stir welding tool having the claimed superabrasive material and the cooling system (abstract; Figures and claim 7). Nelson et al. does not teach the claimed support mandrel or the diffusion preventing material on the anvil.

Litwinski et al. teaches the claimed support mandrel (Figures). Packer et al. teaches the diffusion preventing material on the anvil (abstract). At the time of the invention it would have been obvious to one of ordinary skill in the art to combine the support mandrel of Litwinski et al. with the diffusion preventing material of Packer et al. and the friction stir welding tool of Packer et al. in order to support the inner side of hollow cylindrical ferrous, non-ferrous or superalloy workpieces and prevent the sticking of the workpieces to the mandrel during a circumferential friction stir welding process.

**Conclusion**

The prior art of record that is cited as of interest is presented on the form-892.
